

Are you raising mosquitos?

MOSQUITO FACTS

FEMALE
42-56 DAYS
MALE
10 DAYS

FACT: Depending on location, species and temperature, mosquitos can live from one week to several months.

FACT: Female mosquitos extract blood from humans and animals in order to lay their eggs - drinking up to three times their weight in blood.

FACT: Mosquitos only need about 1 inch of standing water to lay their eggs.

FACT: Smelly feet are more attractive to mosquitos - so keep those tooties clean.

FACT: Mosquito larvae and pupae cannot survive without water. If a water source evaporates before they transform into adult mosquitos, the young will often die.

FACT: Mosquitos can bite through light-weight fabrics.

1.5 MPH

4 MPH

FACT: Mosquitos fly an estimated 1 to 1.5 miles per hour.

FACT: Depending on the species, mosquitos can be active throughout the day.

Take Precautions and Take Action!

-  Eliminate standing water
-  Turn containers over
-  Remove sources such as tires and buckets
-  Treat standing water with safe mosquito dunks
-  Keep your grass cut
